Adam Östberg

MSc Computer Science student at KTH · Stockholm, Sweden

adam@adamostberg.com adamostberg.com github.com/adam-ostberg LinkedIn

PROFILE

Fourth-year engineering student at KTH studying computer science, specialising in machine learning and AI. I have scraped 4.3 million grocery prices, built my own labelled dataset when none existed, and trained a product matcher that took precision from 0.64 to 0.89.

EDUCATION

MSc Computer Science · KTH Royal Institute of Technology 2026 – 2028

Data Science track, machine learning specialisation. Year four of the civilingenjör programme, Sweden's five-year integrated Master of Science in Engineering.

BSc Media Technology · KTH Royal Institute of Technology 2023 – 2026

Programming, mathematics and interaction design, plus a first machine learning course. Thesis: Matjakt.

PROJECTS

Cross-store product matching · personal project, 2026 github.com/adam-ostberg/product-matcher

- ICA and Coop share no barcodes, so I built a pipeline to match products: TF-IDF on character n-grams proposes ten candidates for each of 26,814 products, and XGBoost scores each pair on 10 features.
- No ground truth existed, so I wrote a keyboard-driven React labelling tool and hand-labelled 424 products. On a held-out test set the model reached 0.89 precision against 0.64 for a tuned TF-IDF baseline.
- Cross-validated in groups by product to avoid leakage, and set the threshold for precision over recall: a wrong match invents a price gap, a missed one costs little.
- Across 7,659 matched products, Coop was cheaper on 49% and ICA on 24%.

Matjakt · bachelor's thesis with three classmates, 2026 matjakt.org · adamostberg.com/projects/matjakt

- A site that tracks 4.3 million prices for 57,000 products across about 500 ICA and Coop stores, finds the cheapest way to buy a whole shopping list and draws the route on a map.
- Wrote parallel Scrapy spiders that clear each site's bot check once in Playwright, and the ingestion pipeline behind them: bulk loads into Postgres, append-only price history, re-runnable loads.
- In our user study, 19 of 20 participants said it could lower their grocery bill. Exhibited at Tekniska museet.

Student dropout prediction · course project, team of four, 2025 .../projects/student-dropout-prediction

- Compared five classifiers on 3,630 student records; tuned XGBoost came out best at 0.72 accuracy. Our demo app then predicted that three of the four of us would drop out, which we traced to a single feature that does not transfer from Portuguese data to Swedish students.

EXPERIENCE

Data Annotation Intern · Stealth AI startup Aug 2026 – present

- Annotate video used to train real-time machine learning models, and review other annotators' work for quality and consistency against the labelling guidelines.
- Help evaluate model performance, feeding the results back into data and annotation priorities.

Web Developer · Bolagsrättsligt Forum 2021 – 2026

- Built bolagsrattsligtforum.se from scratch for a provider of continuing-education courses in company and securities law, with course pages and registration, and maintained it for five years.

B2B Prospecting · Prebona AB, Lisbon Jun – Aug 2023

- Researched potential business clients and ran targeted cold-email outreach.

LEADERSHIP

Co-Director, "Getmannen" · Media Technology Chapter, KTH 2025 – 2026

Co-directed the chapter's yearly film with a team of about 20 people.

Corporate Relations Manager · Medias Branschdag, KTH Sep 2024 – Jun 2025

Responsible for relations with the companies taking part in the Media Technology career fair.

SKILLS

Programming	Python, SQL, C++, C#, JavaScript/TypeScript
ML and data	scikit-learn, XGBoost, pandas, NumPy, matplotlib, Jupyter
Web	React, Next.js, Three.js, Supabase, Firebase, PostgreSQL
Tools	Git, Docker, Scrapy, Playwright, Unity, Claude Code
Languages	Swedish (native), English (fluent)
Driver's licence	B (manual)

ALSO

Built a combat robot that placed second in a national inter-school tournament. Skiing, gym, and poker.
